

Programme of the Movement Disorders Working Group Dr Jean-Pierre Lin and Professor Michel Willemsen

- 17:00 Wieke Eggink, Netherlands Non-motor en Motor Determinants of Health-Related Quality of Life in children and young adults with dystonia
- 17:20 Federica Graziola, Italy The tonic labyrinthine response is a hallmark of Dystonia
- 17:40 Belén Pérez Dueñas, Spain Myoclonus dystonia syndrome: rating disease severity by means of the Unified Myoclonus and Burke Fahn Marsden Rating Scales in a cohort of 40 Spanish patients with mutations in SGCE.
- 18:00 Nienke van Os, Netherlands Ataxia telangiectasia in adulthood
- 18:20 Lucia Abela, United Kingdom Development of a Patient-Derived Dopaminergic Neuronal Cell Model to Study Disease Mechanisms in Childhood Parkinsonism
- 18:40 Stavros Tsagkaris, UK. Increased baseline dystonia severity is associated with cerebral glucose hypometabolism as well as relative regional cortical hypermetabolism during resting [18] Fluoro-Deoxy Glucose Positron Emission Tomography (FDG-PET) imaging in children being assessed for Deep Brain Stimulation (DBS) neuromodulation
- 19.00 David Gómez-Andrés, Spain Machine learning meets motor deep phenotyping: gait classification in hereditary spastic paraplegia
- 19.20 Hortensia Gimeno, UK. Augmenting deep brain stimulation with a cognitive approach: N-of-1 trial with replications with children with hyperkinetic movement disorders.
- 19.20 ALL PARTICIPANTS Group Discussion of all projects
- 19.55 J-P Lin & M Willemsen Summary and Thanks
