What you will learn

Original and innovative

dinical practice aimed at connecting the basic mechanisms of disease to clinical symptoms

Biomarkers and treatments

of neurometabolic and neurodegenerative diseases

The biochemical and cell biology bases of neurological symptoms

Director:

Pr Garcia-Cazorla

Head Neurometabolic Unit Sant Joan de Déu (SJD), Barcelona

Coordinators:

Pr. Jean-Marie Saudubray

Emeritus Professor of Pediatrics and Inborn Errors of Metabolis, Paris

Pr. Oscar Marin

Director of the Centre for Developmental Neurobiology at King's College , london

Dr. Juliana Ribeiro

Pediatric Neurologist at SJD, Barcelona

Pr. Fanny Mochel

Head Neurometabolic Unit, La Pitié Salpetrière, Paris

Dr Heidy Baide

Pediatric Neurologist at SJD, Barcelona

Dr Nazareno Lascano

Pediatric Neurologist at SJD, Barcelona

Master in
NEUROMETABOLISM
AND CELL BIOLOGY
FOR CLINICIANS

Holistic training in neurometabolism and cell biology for a new generation of talented clinicians

NOVEL PARADIGM

This international master aims to lay the ground for the much-needed novel paradigm in clinical neurology. While classic approach is mainly based on clinical symptoms, here we aim to integrate different levels of complexity in agreement with the intricate operational network of the nervous system.

The neurological manifestations will be linked to genetic, molecular and biochemical markers, cellular pathways, and brain circuitries in a comprehensive manner as a necessary and new approach.

Most of all, we will provide educational tools to integrate the "pathophysiological thinking" in the clinical practice of both neurology and inborn errors of metabolism (in which >80% of diseases have neurological involvement).

This is indeed linked to the current development of

new therapies

ONLINE MASTER with on-site summer schools

Duration: **2 years**Beginning: **October 2024**Credit: **45 credit/year**Dedication regime: **Part Time**Language: **English**

Target audience:
Health professionals dedicated to
neurology (pediatric and adult) and/or
inborn errors of metabolism

OUR PROGRAMME

The educational content of the first year is related to basic knowledge on brain metabolism and cellular neurobiology.

Part I: Cellular Neurochemistry and related diseases

Part II: Nervous system compartments 1: Intracellular communication and related diseases

Part III: Nervous system compartments 2: Intercellular communication and related diseases

The second year aims to connect neurochemistry and cell biology to the main neurological syndromes

Part IV: Neurodevelopment and Systems Neurobiology

Part V: Clinical syndromes and related biological mechanisms

Part VI: Biomarkers and New treatments

We empower our students to a new perspective on the knowledge of brain diseases"

SUMMER SCHOOLS

This master includes two summer schools in Barcelona

International renowned teachers

Professors of renowned international prestige will give the online lectures and will have the possibility through specific tutorial dasses to interact and discuss with the students during live sessions.
